DETAILED ACTION

1. This action is in response to After Final Amendments filed on 01/20/2010.

Claims 1, 13, 17 and 21 are independent and have been amended.

Claims 1, 3-13, 15-17, 19-21 and 23-43 are presented for examination and are pending.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

Examiner has carefully considered After Final Amendment dated 01/20/2010, updated search and reviewed all pending claims.

The current application is directed towards a content related information provision apparatus and a content related information provision method, a bulletin board system, as well as a computer program that support sharing of reference information such as remarks concerning respective scenes in program contents on the air or recorded program contents among users. The claimed invention is implemented on "system" referred to in this context means a logical set of plural apparatuses (or functional modules realizing specific functions), and it does not matter whether respective apparatuses or functional modules are in a single housing. Computer program that can realize a mechanism in which, while reading a remark in a bulletin board system, a user searches a program or a scene referred to by the remark out of contents stored in a PC or a video recording machine for home use and views the

Art Unit: 2444

program or the scene or views a program or a scene related to specific WWW contents in the same manner (page 03, paragraph [0030-0033], page 01, paragraph [0012]).

Independent Claims 1, 13, 17 and 21 in particular is directed to a bulletin board system that supports information exchange for contents including reference data arranged in time series. The system includes, a related information receiver configured to receive related information from one or more user devices, the related information including an identification of the contents, user remarks to the contents, and a reference time position of the user remarks relating to the contents, a reference information receiver configured to receive reference information from the one or more user devices, the reference information including a keyword specifying contents to be referred to by the user remarks to the contents, and specifying a time reference position in the contents. In addition, the system includes a unit for specifying an installation region of a terminal apparatus of the one or more user devices to be a provision destination of information, the installation region indicating a geographic region where the terminal apparatus of the one or more user devices is installed; and a unit that changes contents of reference information according to the specified installation region.

One of the prior art of records, Logan discloses, system for utilizing metadata created either at a central location for shared use by connected users, or at each individual user's location, to enhance user's enjoyment of available broadcast programming content. A variety of mechanisms are employed for automatically and manually identifying and designating programming segments, associating descriptive metadata which the identified segments, distributing the metadata for use at client

Art Unit: 2444

locations, and using the supplied metadata to selectively record and playback desired programming. Metadata created by users may be shared directly between users. When shareable metadata exists at a user location, it may be "registered" by supplying its resource address (such as an Internet URL) to the remote location which then relays the URL to other users who directly access the descriptive metadata from the other user's metadata storage 133 in a peer-to-peer transfer. In this form, the remote facility shown in FIG. 1 operates as a registry or directory that permits users to share descriptive metadata about broadcast programming with one another on a community basis.

Logan however does not disclose bulletin board system which includes a unit for specifying an installation region of a terminal apparatus of the one or more user devices, where the installation region indicates a geographic region where the terminal apparatus is installed. Logan is silent regarding unit that changes contents of reference information according to the specified installation region.

Upon an updated search of the prior art, no significant sources were located that teach or suggest, "a related information receiver configured to receive related information from one or more user devices, the related information including an identification of the contents, user remarks to the contents, and a reference time position of the user remarks relating to the contents, a reference information receiver configured to receive reference information from the one or more user devices, the reference information including a keyword specifying contents to be referred to by the user remarks to the contents, and specifying a time reference position in the contents.

Art Unit: 2444

The system includes a unit for specifying an installation region of a terminal apparatus of the one or more user devices, where the installation region indicates a geographic region where the terminal apparatus is installed.”

Thus the prior art of record neither render nor anticipate the claimed invention.

Therefore, all pending claims 1, 3-13, 15-17, 19-21 and 23-43 are allowed.

Conclusion

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
